Subject: M6 Numbers

When LSP conducted their initial inspection of the Explo facility, an estimated 6-9 million lbs. of improperly stored and unsecured M6 propellant was discovered. Throughout the course of their investigation, LSP estimated the total volume of M6 propellant at the Explo site to be 20 million lbs., including the material stored within the magazines at Camp Minden. Currently, approximately 2.5 million lbs. of M6 is unsecured and improperly stored at the Explo Site.
